

My symmetry homework

When I was walking I was looking around for things that were symmetrical I found a lot of leaves, here are some of them. You may not be able to see the black lines of symmetry. There was also this eight on a sign it has two lines of symmetry

My volume homework

Here is a picture of the containers from the biggest capacity to the smallest capacity from left to right. This is the capacity of the containers:

Jug= 1.6l or 1600ml

Milk bottle= 1l or 1000ml

Plastic bottle= 1l or 1000ml

Water bottle= 0.5l or 500ml

Mug=0.35l or 350ml

Coke glass= 0.3l or 300ml

Red glass= 0.3l or 300ml

Small wine glass= 0.06l or 60ml

I also coloured the water and put sparkles in it. Here are the pictures. I found out that different shapes can hold the same capacity like the plastic and milk bottles and the two glasses.

My steps homework

For my steps homework I walked 1.2 miles. When I got home I walked 0.1 mile and counted my steps which was 270 steps. I then times it by 12 which is 3240. So I did approximately 3240 steps in 1.2 miles.
